

Automating Property Portal & CRM Workflows

Property Finder + Bayut + Bitrix24

From manual operations to an API-driven real estate data ecosystem.

Case Study by Muhammad Moez Khan

Full Stack / Product Engineer

The Problem Wasn't Data. It Was Manual Work.

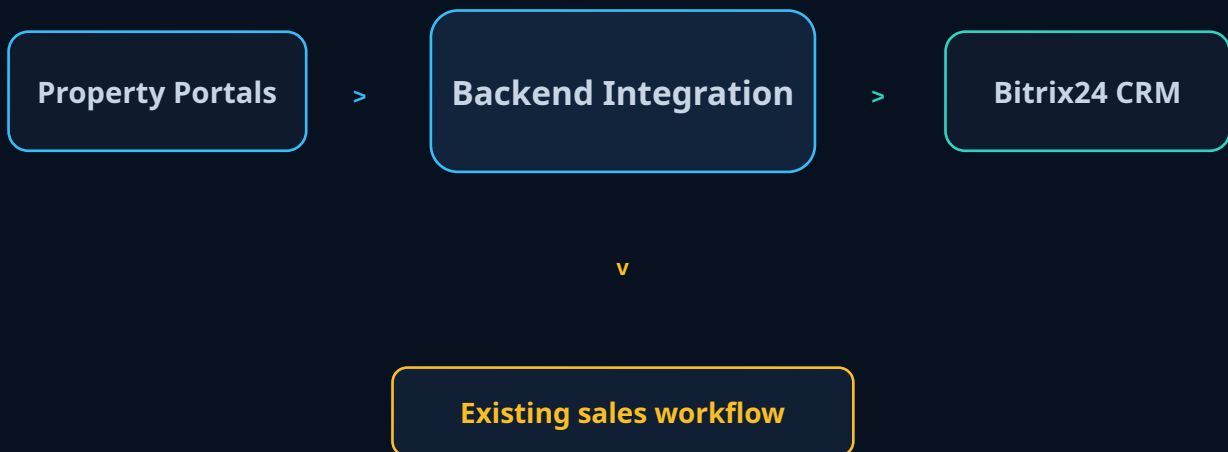

Property and lead data existed across systems, but teams still depended on manual processes.

When systems don't communicate, people become the integration layer.

Make the Systems Talk to Each Other.

Create an automated data flow connecting property portals, the platform backend and Bitrix24 CRM.

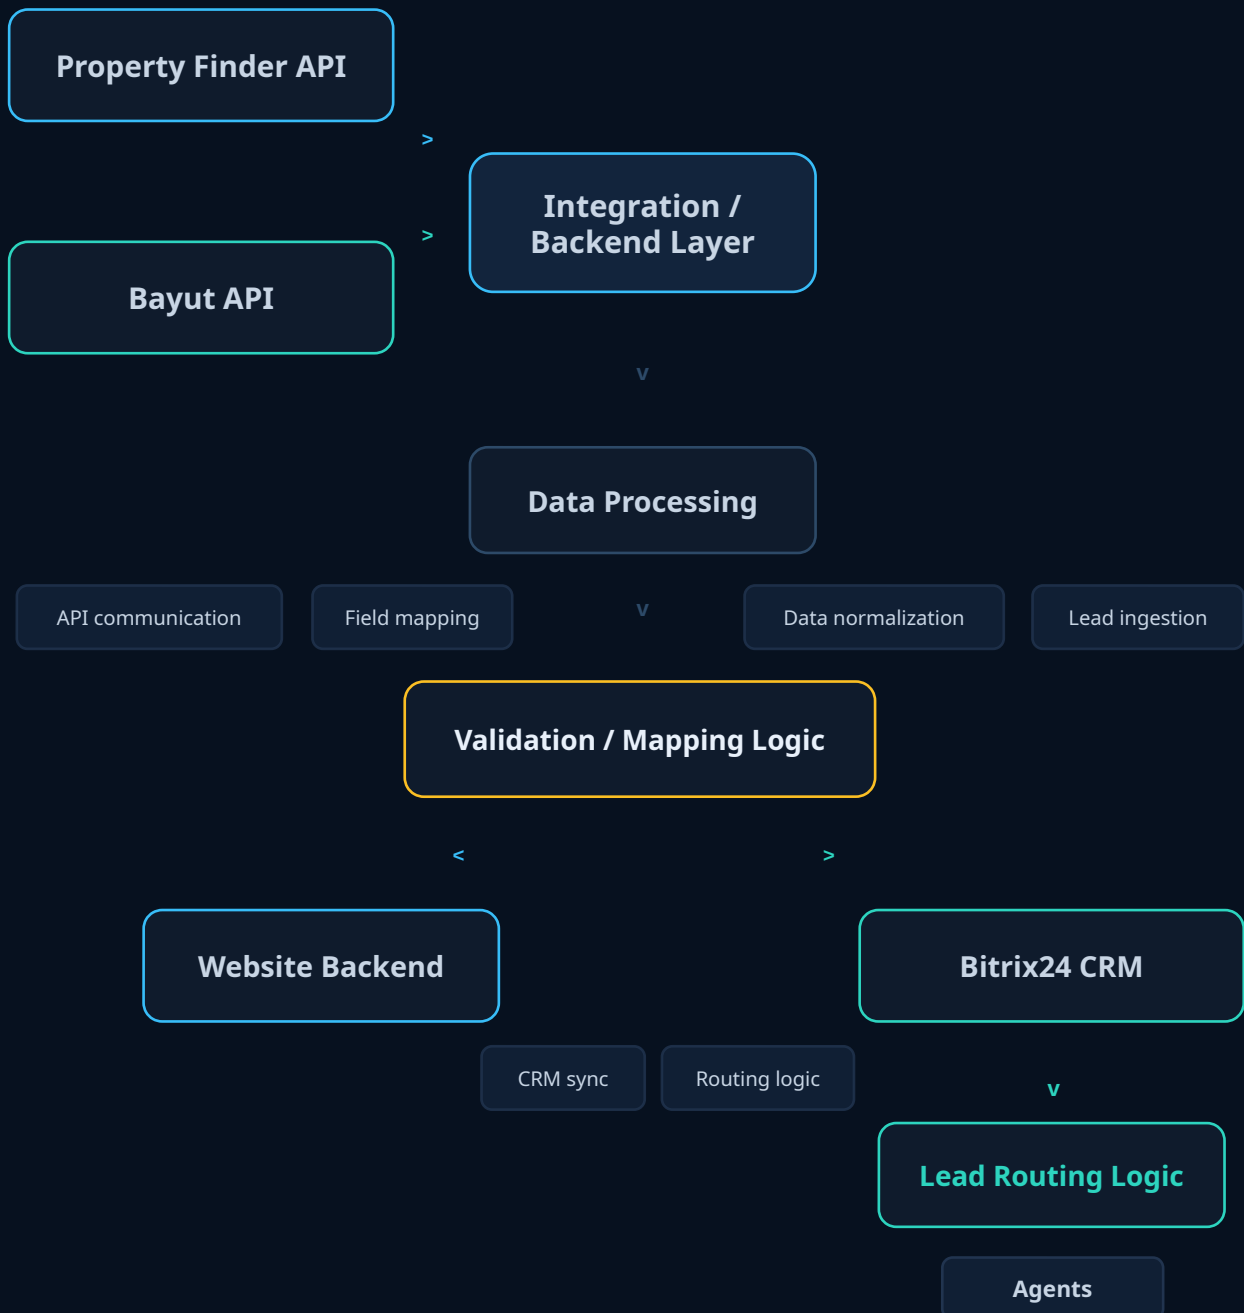

- Synchronize property information
- Capture incoming leads automatically
- Send data into Bitrix24
- Apply business routing logic
- Reduce repetitive admin work
- Help agents respond faster

Remove manual handoffs without disrupting the existing sales workflow.

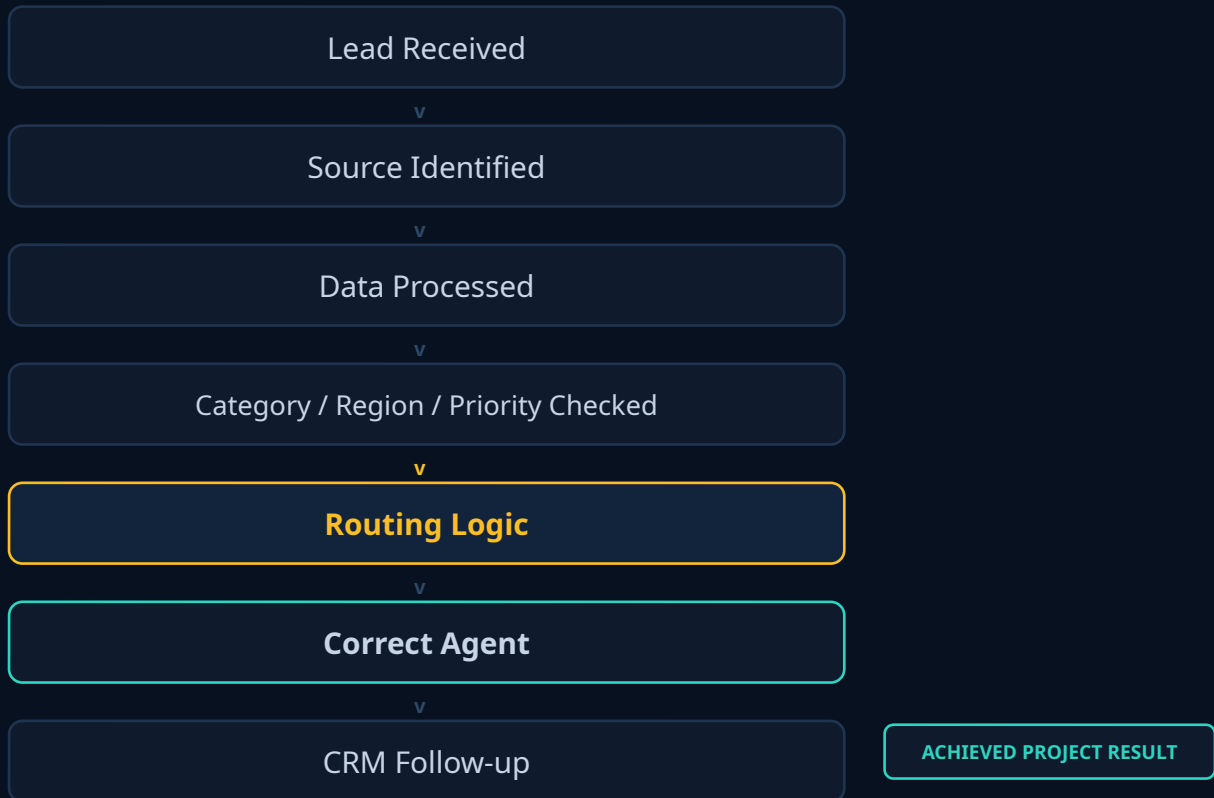

The API-Driven Architecture

A focused integration layer connecting portal data, backend logic and CRM workflows.

From Incoming Lead to the Right Agent

Incoming property enquiries were processed and routed through Bitrix24.

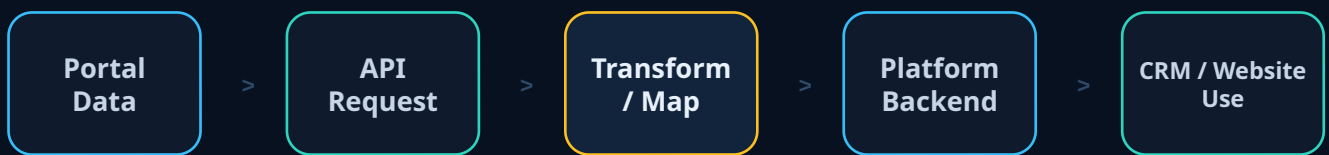

~45%

Reduction in lead
response /
processing time

Less manual assignment. Faster action.

Removing Repetitive Property Data Work

Property Finder and Bayut API integrations enabled property data to flow into the platform without repeated manual updates.

Data automation scope

- Portal API communication
- Property field transformation
- Backend synchronization
- CRM and website usage

IMPLEMENTED RESULT

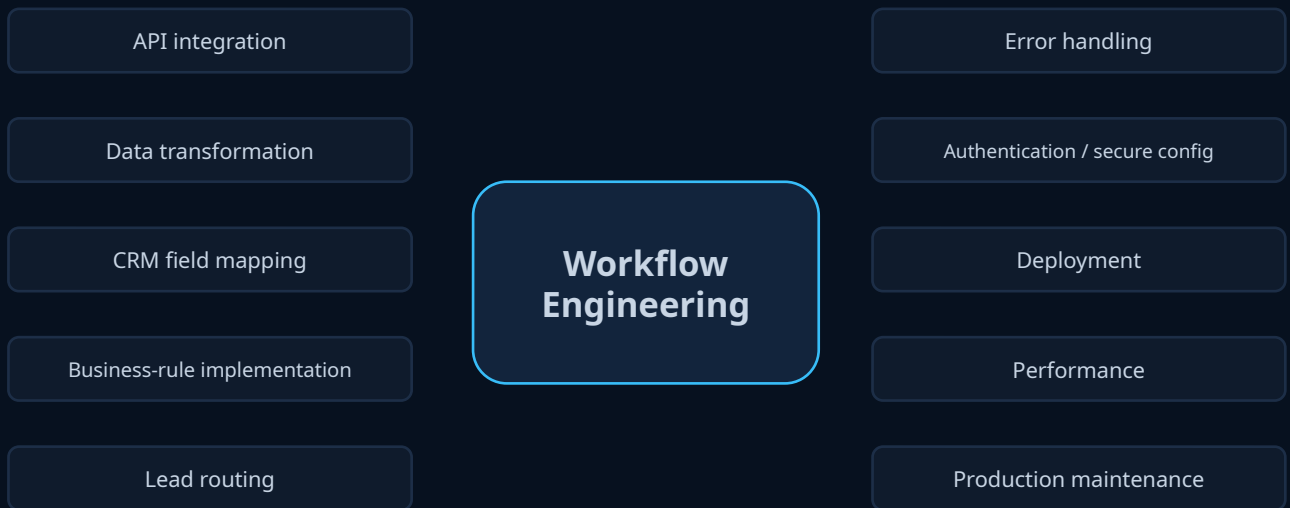

~90%

**Reduction in manual
data-entry overhead**

Not 100% automation - the goal was removing repetitive property data work.

More Than Connecting Two APIs

The real work was turning different systems and business rules into one reliable operational flow.

Engineer, not just CRM administrator

What Changed?

BEFORE

- Manual data entry
- Manual lead handoffs
- Disconnected systems
- Slower agent response
- Repeated operational work

AFTER

- API-driven data flow
- Automated CRM ingestion
- Rule-based lead routing
- Faster response workflow
- Centralized connected ecosystem

~90%

Reduction in manual data-
entry overhead

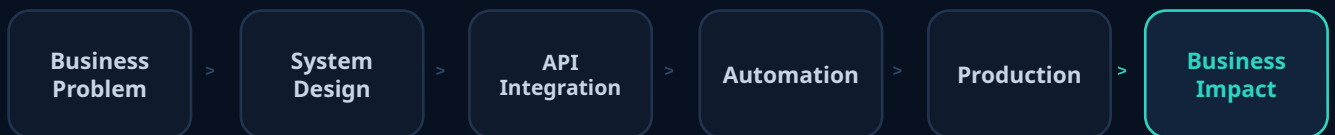

~45%

Reduction in lead response /
processing time

Results from the implemented real estate workflow.

This Wasn't Just an Integration.

It was about understanding a business process, designing the data flow, integrating external systems, automating the operational logic, and taking the solution into production.

Tech / Platforms

REST APIs

Bitrix24

Property Finder API

Bayut API

Backend Integration

CRM Automation

Cloud / CI-CD

This is the kind of engineering I enjoy most: turning manual business processes into connected, automated systems.

Building systems that connect technology with real operational problems.
